

TAIWO PRAISE OLUWATOBILOBA

FLUTTER MOBILE DEVELOPER

Lagos, Nigeria | praisetaiwo24@gmail.com | +234 703 292 6808 | github.com/officialpraise | linkedin.com/in/praisetaiwo24

PROFILE

Flutter mobile developer with over two years of hands-on Dart experience across internship, graduate-trainee and national service roles. Contributed to three production applications in fintech, rewards and education — two live on Google Play and the App Store. Comfortable owning a feature end to end: clean architecture, BLoC state management, secure authentication, REST integration and store release.

EXPERIENCE

Graduate Trainee INTERNSHIP Nov 2024 – Present

CashToken Rewards Africa — Lagos, Nigeria (Hybrid)

- Developed the WinBundle mobile client end to end — clean architecture per feature, BLoC state management, biometric authentication and a silent token-refresh interceptor.
- Refactored a legacy area of a live production Flutter app for performance, shipping incrementally to avoid regressions for existing users.
- Shipped new feature modules into live products and owned release cycles — build flavours, signing and store submission.
- Carried a shipped app through a backend API migration without breaking the installed version.
- Built a generative-AI chatbot in Python, and automated recurring workflows with n8n.

Student Intern INTERNSHIP Sep 2023 – Jan 2024

CashToken Rewards Africa — Lagos, Nigeria (On-site)

- Developed and maintained cross-platform Flutter applications for Android and iOS.
- Integrated REST APIs, payment libraries and local databases; resolved production defects.

Student Intern INTERNSHIP Dec 2022 – Mar 2023

CBC EMEA — Lagos, Nigeria (On-site)

- Contributed to client-facing Flutter and Dart development; took part in code review and debugging.

SELECTED PROJECTS

WinBundle — bill payments with a weekly prize draw Live on Google Play

Flutter · BLoC · go_router · Dio · get_it · local_auth

Sole mobile developer. Nine feature modules on clean architecture. Designed a three-state session model (authenticated / locked / unauthenticated) with a 15-minute inactivity lock, holding session identity in encrypted storage without caching replayable credentials.

Learners Forge — exam-prep platform (JAMB, WAEC, NECO) Personal project · v1.0.0

Flutter · BLoC · bloc_concurrency · go_router · Dio · bloc_test

Sole developer — specification, architecture, UI and API contract. Twelve feature modules, with paywalled content protected by stacked auth and subscription guards in the router rather than the UI. BLoC unit tests from the first commit.

CashToken Rewards — multi-market rewards and cashback Live on Google Play & App Store

Flutter · Provider · SQLite · REST · build flavours

One of two developers on an inherited production codebase serving Nigeria and the UK, within a three-environment service layer whose development build runs fully offline against a seeded local database.

TECHNICAL SKILLS

Mobile	Flutter, Dart, clean architecture, Android & iOS release builds, platform channels
State & routing	BLoC, bloc_concurrency, Riverpod, GetX, Provider, go_router, get_it
Data & networking	Dio, REST, Firebase, gRPC / Protocol Buffers, SQLite
Security	Biometric authentication, JWT refresh flows, encrypted storage / Keychain, root detection
Testing & delivery	bloc_test, mocktail, Git, CI/CD, Docker, build flavours & signing, store submission
Other	Python, n8n workflow automation

EDUCATION & RECOGNITION

B.Eng, Information & Communication Technology 2019 – 2024

Air Force Institute of Technology (AFIT), Kaduna, Nigeria

- First Class Honours — CGPA 4.87 / 5.0.** Best Graduating Student, Department of ICT and Faculty of Ground & Communication Engineering.
- NIEEE Certificate of Excellence (2025) · NSE Award of Excellence (2024) · AFIT Certificate of Merit (2024)
- NYSC** — CashToken Rewards Africa, Lagos · Apr 2025 – Apr 2026 (completed) · **Memberships** — GMNSE, Nigerian Society of Engineers · Pupil Member, COREN
